

Spett. Rentar Italia

C.a. Sig. Nicola Oliva

La Regina di San Marzano is one of the leading companies in the food processing in Italian Sector. It is located in the cradle of tomato "San Marzano" and it is leading in the production of tomatoes "Pelati" and sauces. It has point of strengths in quality, innovation and product enhancement. Today it exports its products all over the world, from Europe to America, to Asia and Canada.

The company has three oil boilers at high power (pressure and temperature) fed at low sulphur oil of prestigious brands. On one of the boilers, used for pasta sauces production line, It was decided to install under test (for examination) a catalyst Rentar model HBFN2012SS.

From the beginning of the test, It was able to notice a reduction of consumption of the fuel and a reduction of the exhaust gases. Specifically analyzing in detail the consumption over a period of 320 hours of work, it is noted that the plant has obtained a reduction of oil about around **12%**. Such savings is attested to today, during normal and continuous operation, between **the 8** and **the 12%**.

Given the positive results the corporation decided to buy two more catalysts of the same model for the other two boilers used for peeled tomatoes production. Although the boilers in this case have worked less hours due to limit of tomato campaign, it has attained the same savings.

Given the results the company is satisfied to have purchase Rentar catalyst
